

2 → arr =

0	1	2	3	4	5	6	7	8	9
1	2	3	4	3	1	2	3	4	3
↑	↑	↑	↑	↑	↑	↑	↑	↑	↑

ans =

2	3	4	-1	-1					
---	---	---	----	----	--	--	--	--	--

→ Matlab main logic hai ki
arr ke length of 2 times
karo do aur right side
se traverse karna start karo.

⇒ agr, ^{greater} i ~~smaller~~ than the top of stack
than pop the smaller and peek the
greater.

Note. Same as ~~next~~ next greater element I

ie.

```
for (2n-1; i >= 0; i--) {  
    while (!stack.isEmpty() &&  
           stack.peek() <= num[i%.n]) {
```

```
        stack.pop();  
    }
```

```
if (i < n) {  
    if (stack.isEmpty()) {  
        ans ans[i] = -1;  
        break;
```

```
        ans[i] = stack.peek();  
    }
```

```
    stack.push(nums[i%.n]);  
}
```

```
return ans
```

3.
