

100.) $s = ["h", "e", "l", "l", "o"]$
↳ string ko reverse karna hai.

$s = ["o", "l", "l", "e", "h"]$.

Isme hum two pointer ka use karenge.

Isse, $s = [h, e, l, l, o]$
 ↑ ↑
 left right.

while (right > left) {
 left ko right
 se swap
 karo.

 left ++ ;
 right -- ;
}

Isse

$s = [h, e, l, l, o]$
 ↑ ↑
 left right.

Swap → $[o, e, l, l, h]$
 ↑ ↑
 left right.

Swap → $[o, l, l, e, h]$
 ↑ ↑
 left right.

↳ Iske saath pointer ko nhi
hai swap karne ke liye.

// Code :-

```
class Soln {
```

```
    public static void reverseString(char[] s)
```

```
    {
        int left = 0;
```

```
        int right = s.length - 1;
```

```
        while (right > left) {
```

```
            int temp = s[left];
```

```
            s[left] = s[right];
```

```
            s[right] = temp;
```

```
            left++;
```

```
            right--;
```

```
        }
```

```
    }
```
